

## Exercise

Build a simple app for browsing a list of quotes.

- Create a new page called **QuotesPage**. Use set this page as the main page in **App.cs**:

```
MainPage = new QuotesPage();
```

- Hardcode the quotes in a **string[]**.
- Use **20** units padding for the page (20 units on all sides). You can set this directly in the **ContentPage** element:
- Override the padding for Android and Windows. For Android, use **20, 30, 20, 20**, and for Windows use **20, 40, 20, 20**.
- Set the **Maximum** and **Minimum** attributes of slider:

```
<Slider Maximum="50" Minimum="16"/>
```

- Enable XAML compilation.
